

Angelus Britannicus:
AN
EPHEMERIS
For the Year of our Redemption

1682.
Being the Second after the *Bissextile* or
Leap-Year, and from the Creation of the
World, as some suppose.

563r.
And from the Burning of London, 1666.
Amplified with

Astrological Observations from the
Sun's Ingress into *M R U E S*, and the
other Cardinal Points; with an Account of the
Eclipses, Conjunctions, of the late *COMET*, and
other Configurations of the Heavenly Bodies.
Calculated for the Meridian of *Lon-*
don where the Pole Artick is Elevated
above the Horizon 51 Degr. 32 Min. but may
Indifferently serve for *ENGLAND, SCOTLAND,*
and *IRELAND.*

By John Tanner Student in Physick and Astrology.

The Twenty sixth Impression.

Agunt non Cogunt.

*Altra in Voluntatem hominis & liberam arbitrium
indirecte & per accidens agunt; dum directe
temperamentum significant & disponunt, sensusq;
in consensum trahunt.*

London. Printed by E. Hutton for the
Company of Stationers, 1682.

Common Notes for the Year 1682.

According to the
 Julian, English, Old } Gregorian, Foreign, or
 Account, } New Account.

The glorious Planet Venus is oriental of the Sun and our morn-
ing Star, till the 12 of April this year, then she comes to a
Conjunction of the Sun and is our Evening Star, and so continu-
ing till the end of the year, and till January 23. 1683.

Thy care and wonted prudence still observe,
My Genius, from thy safe Paths do not swerve;
See Chronos, whilst he doth oppose the Sun,
Conceals what's doing, hides what's to be done;
Even so do thou, and know assuredly,
Silence sometimes is the greatest Policy.

January 1682.

The two Inferiours joyn, and do foreshew,
Dense Clouds to follow, sometimes Rain and Snow;
The High'st to Phœbus threats the same, but Jove
With warmer Rayes their influences move;
Warm weather for the Season follows, yet
Retrogradation always threatens wet.

Consult the Face of Heaven, and you shall see
Among the Stars a pleasant Harmony,
As if they had designed to befriend us,
A pleasant winter and warm weather send us.
The Constellations moist, and portends small
And gentle drizzling Rain sometimes to fall.

March hath xxxi days.

The sturdy Hot-brain'd Mars that loves to wrangle,
Quarrels with Jove upon the western Angle;
Contentions, Discords, Slaughters hence arise,
Frequent Experience hath inform'd the wise:
Would you know where the Effects shall be? I answer
That Mars in Aries is, and Jove in Cancer.

March 1682.

Four Squares to Phœron raise the winds full high,
And doth at times afford a troubled Skie,
Jove seems inclin'd sometimes to give us rain,
Yet the brisk gales do clear the Air again,
The Lion blusters for the most part, hence
We've little of the Lamb-like Influence.

April 1682.

whilst the Infortunes with malignant Rayes
Aspect each other, expect several dayes
Tempestuous storms of wind, and sometimes rain,
Till other Aspects clear the Air again:
The Fortunes bounteous rayes doth us befriend,
And sends us milder weather towards the end.

May hath xxxi days.

To beautifie the merry Month of May,
Each Planet smiles, proclaims a Holy day;
Both Foreign News and Peaceful Missives too,
Our Merchants hark to know what good they do;
Libels are rise; Clippers and Coiners gains
Provoketh Justice to requite their pains.

If a cool May and windy too be kind,
 I hope that this Month will not be behind
 In friendship to the Farmer, in his Grain;
 The Stars do seem to gratifie his pain:
 But God the Stars doth rule, their influence
 Look up to him, all goodness comes from thence.

June hath xxx days

Mars hasty passage through the Heavenly Twins,
 confounds the good that better Stars begins:
 Mens hopes are disappointed, and their gains
 Diverted, that always sweetneth mens pains.
 For oft we see before a sudden shower,
 The Sun upon us hath the greatest power.

Whilst both the Fortunes joyn and rise together,
we may expect a pleasant, healthy weather;
Though sometimes Saturn's black wail clouds the Air,
Yet for the most part it continues fair:
Saturn and Venus at the last sends Rain,
And grateful too unto the latter Grain.

July 1682.

Month Days

The Sun and Jove clad with the fiery flames
Of Heavens fierce Lyon kindleth extremes
Of heat, hence roaring thunder doth arise,
And piercing lightning rending ope the skies:
Saturn can scarce prevail to cool their breath,
Which the Earths green to Cinders withereth.

August 1682.

Month Days.

If you do view the face of Heaven, you'll see
Among the Seven no ray of enmity :
The Heavenly Bodies all combine together,
To give us fair and pleasant Harvest weather.
Improve the season while 'tis in your power,
For what is past you can't recal one hour.

September hath xxx days.

Two dire Conjunctions threaten us agen,
 Sure Heaven and Earth forewarneth sinful men;
 Europe be warn'd by past miseries,
 Let late experience learn thee to be wise:
 Stay thy foot yet, whilst thou'rt in mischiefs gate,
 Ill comes too soon. Repentance oft too late.

September 1682.

Month Days. 1 You may be sure, when Mars shall joynd be
To the highest two, there's contrarietie;
Like fire and water met, then 'tis no wonder
If it sends lightning, hasty showers and thunder,
High winds and tempests with a troubled air,
Till the mild Stars do make the weather fair.

October 1682.

Month Days.

what change soever they produce ith weather.
 You may be sure last many days together;
 High gusts of wind and a distempered skie,
 Stir'd up by th^e Quartile rays of Mercury.
 But afterwards to Jove, the loving ray,
 Of Venus helps the stormy winds to lay.

*All under Leo feels the direful rage
Of their influx, scourging this desperate age:
Rome's Church that swelleth in her mightiness,
Stop her career, her outrages suppress;
Who should like balm apply'd the holy word,
Not laid her hand unto the unhallowed's word.*

Month Days.

The Sun and Saturn by their quartile rays,
Obscure the air, cause cold and cloudy days.
Phaeton comes in and raises winds so high,
That something clears the air, for th' most part dry.
The rest of the Erraticks gives us reason
To judge the weather moderate for the season.

At first the Planet Saturn clouds the Sky;
Jove clears the Air again immediately.
Hermes to Mars the like, but towards the end,
Variety of Influences tend
To various weather, and oft changing Air,
Warm for the season, for the most part fair.

ASTROLOGICAL OBSERVATIONS

for the year 1682.

Muse peep out oild clouds of misery,
This Globe of Earth's subjected to; by and by
Inclin'd to observe Heavens motions at a stand,
Fearing lest greater mischiefs are at hand;
And looking back at the past Heavenly Blaze,
Which lately did the wondering world amaze,
And threatens Famine, Natures great despair,
And by the rankness of contagious air,
Invades us with mortalities dire doom,
By slaughter frees from worse days to come!
Searching in every corner, every nook,
Oild angry Welkin Stars with meagre look,
Plenty of Vials fill'd with Baneful wrath,
Directed in Gods Providential path;
And from the hand of each furious spright,
Drops store of poison upon every night.
My sighing, sinking muse starts up; crys she,
Nor help beneath the Heaven of Heavens I see.
Cease sinful mortals, haste to cease from sin,
Which op'd the door to let Gods judgments in.
Humble your souls before your jealous God,
For that's the way to scape his angry rod.

Of the Use of the Almanack.

HAVING so often explained the Almanack, which in it
self is easie enough to be understood by every Intel-
ligent Reader, I shall now be more concise than former-
ly in the Explanation; to pass by the two first Tables
after the Title-page, the next with nine Columns shows
every 5 days of the month, the Suns rising, setting, length
of the day, night, Planetary hour, twilight, and all in a
particular Column.

by inspection; remember that M. stands for morning
 A afternoon. The left hand page of the Almanack hath
 11 Columns, which shew the days of the month, Week,
 Festivals, &c. & place, π , σ , \odot , \odot , \odot , with the Aspects
 of the Moon to them, place of the Moon and her Lat-
 itude. The right hand page hath the Changes, Fulls, and
 Quarters of the Moon, the increase, and decrease of the
 days, rising and setting of some of the fixed Stars, &c. the
 Aspects and change of the weather.

The two pages after the Almanack shews you the exact
 time of the Moons coming to the South, you may per-
 ceive it by inspection, taking the day in the first Column
 and the month at the head; and the common angle shews
 you the time. A denotes afternoon, M morning; with
 which the Tydes in the Ports following are precisely
 known.

The Table of the Ports.

Queenborough, Southamton, Portsmouth, Isle of Wight	00 00
Rochester, Mald, Aberd, Redland, West of the Nore	00 45
Gravesend, Downs, Rummey, Silly, Blackness	1 30
Dundee, St. Andrew, Lisbon, Bell Isle, Holy Isle	2 15
London, Timmouth, Hartlepool, Whiteby, Amsterdamm	3 00
Barwick, Flamboroughhead, Bridlington-bar	3 45
Savern, Leith, Dunbar, Kingsale, Calice creek	4 30
Newcastle, Humber, Falmouth, Dartmouth, Lizard	5 15
Plimouth, Weymouth, Hull, Lynn, Lundy, Holms	6 00
Bristol, Foulnes, at the Start	6 45
Milford, Bridgwater, Lands-end, Waterford, Torol	7 30
Yorland, Peterport, Harflew, Hague, Dublin	8 15
Poole, Carnes, Orkney, Isle of man, East Island	9 00
Needles, Lusto, North and South Foreland	9 45
Yarmouth, Dover, Harwich, Calice-road, Billein	10 30
Rye, Winchelsea, Gorce, Thames, Rhodes	11 15

To find the time of High water at any of these Ports

which add the hour and minute against the Port, which giveth the time of High-water.

For example, if I would know when it is High-water at *London-Bridge*, upon the 18 of *April* this year, I first have recourse to the first page of the Table after the Almanack, and find that on the 18 of *April* the Moon comes to the South at 11 ho. past 11 at night, but because it is near midnight, I enquire what time she comes to the South the day before, viz. the 9 day, and find it to be at 34 min. past 10, to which I add 7 hours, and 36 min. the number against the Port, and it produceth 18 ho. and 4 min. deducting 12, and there remains 6 ho. and 4 min. which is the hour of the morning on the 18 of *April*, of High-water at *Bridgewater*; the like you may do at any other place in the Table. If you would know the precise time of the Evening-tide that day, see the difference of the time of Southing, which between the 9th and 18 day is 47 min. the half of which is 13. added to the former gives the time of the Evening tide at 17 min. past six at night. At the Spring-tides it floweth one point of the Compass more than at the Neap, high Wind, and Land-floods may cause some variation.

To know the hour and min. of the night, by a Sun-dial, subtract the hours and minutes the shadow wabteeth of the line 12 from the Moons Southing, or add it to the Southing if the shadow be past, the sum is the hour and minute of the night.

Of the Spring-Quarter.

THE Spring commenceth with the Suns Ingress into the Vernal Sign *Aries*, and it happeneth this year on the ninth day of *March* at 14 hours 59 min. and 26 seconds, the apparent time Astronomically, vulgarly on the tenth of *March* at 59 min. 26 seconds past 2 in the morning, according to the *British* Tables, and the following Figure is set to that time, and to the Meridian

of the famous City of *London*, which God preserve.
 We have Ascending the Tropical Sign γ s about which point of the Heavens the late prodigious Comet shewed it self most dreadful ; from which we may conjecture rationally that some eminent event, which God in his Providence hath designed as the effects of that eminent *Phenomenon*, will be made manifest to the Sons of men about this time ; I shall give my Reader an account of that Comet in its proper place, and therein be very concise, yet as large as my scantling of Paper will admit. The Figure it self bespeaks the insuspicious condition of the Vulgar or Commonalty of several Nations, great poverty occasioned by want of Trade, heavy Taxations and Impositions from their Superiors, with oppressive Quartering of Soldiers, Plunderings, Rapines, and

tion of this Quarter, having the most essential Dignities in the Helejiacal places of the three Figures. ♄ is posited in the Ascendent of England, and in the third House of the Revolutionary Figure, in a good state. *Sic fuit, Si quando in revolutione anni Mars fuerit in bono statu, significat quod vassalli regis erunt obediētes regi & integri.* When in the revolution of the year ♄ shall be in a good state, it signifieth that the vassals or subjects shall be obedient to the King and Government. *Si fuerit sub radiu significat quod viles homines insurgent contra regem, & vincēt eam.* If he be under the Sun-beams, it signifieth the vile or mean quality shall rise against their Governour and subdue him. *In signo mobili magnas lites significat.* If he be in a movable Sign, he signifieth great strifes and contentions. *Etiā si Mars fuerit in quarta Fovis, confligent milites in illo Anno, cum suis inimicis, & in eodem exercitu unus cum alio & tunc ratione aliqui eorum perdentur, & mutabunt se de uno loco ad alium, & eorum aliqui ibunt ad adiuvandum inimicos reges & si ♄ fuerit Dominus decime domus, ipsemet rex exibat de terra sua.* If he be in ☿ to ♃, the Soldiers will fight or skirmish with their enemies that year, mutiny one with another, kill each other, run from their colours, and revolt to the enemy; and if ♄ be Lord of the Tenth, great men will be forced to fly out of their own Country and Dominions. The propinquity of ♄ to ♄ as he is Lord of our Six, and Lord of the sixth house in the Revolutionary Figure, he causes Burning Fevers, Frenzy and madness; to our Nation many Murders and Embassies, great contention about Religion and Religious Rites and Ceremonies. The Position of ♄ gives inquietness to Italy, and disturbs the City of Rome it self, and the Clergy of several Orders with various and seditious Principles (I mean among themselves) much to the disturbance of the City of Rome. The Plague or some Epidemical distemper

Zodiac is large upon these Positions, and too large to insert. I shall abreviate his observations. *Cum fuerit ♄ Dominus Anni at in Ariete, significat ventos validos, & multas ac validas mutationes aeris in partibus orientalibus, &c.* If ♄ be Lord of the year and in Aries, he signifieth strong winds, and great mutations of the air in the Eastern parts, diseases in the eyes, and scarcity of rain. War in those parts, and abundance of corn; to the places under Aries, wrangling, contentious fightings, and many evils to ensue; they shall vanquish and overcome their enemies, they shall delight in arms, and bring up their youth in the exercise of them; to the King and their Superiors shall the subjects render a venerable esteem, and due and cheerful obedience, &c. *Si fuerit ♄ Latitudo meridiana, significat tonitrua, coruscationes & fulgura.* If he hath South-Latitude, it signifieth Thunder, Lightning, and coruscations. His Occidentality, great troubles, fears and jealousies to befall men, treachery and trepanning by wolves in sheeps clothing, and such rascally Hypocrites. *Attende in revolutionibus annorum mundi, si fuerit Saturnus in signo fixo, quoniam habet tunc significare mortalitatem, & terra nascentium penuriam, atq; dissolutionem.* Observe in the Revolutions of the world, if ♄ be in a fixed Sign, because he then hath signification of mortality, and scarcity of the fruits of the earth, this is to be understood of such fruits, and such places where droughe produceth a scarcity. *Bonatus goes on, Sed in Leone fortius, ac durius, & durabilius quam in aliis.* The aforementioned effects are to be expected to be more forcible, harder, and of longer continuance, for as much as ♄ is in the Sign ♌, his North Latitude signifieth a corruption of the air, gross and thick, more than ordinary, at those times subject to such weather. His retrogradation would much aggravate his evil influence, but that he is near the

the West Horizon, though with opposite rays to the Ascendant, doth (we hope) much abate the evil influence of the two Infortunes.

Of the Summer Quarter.

THE Summer Solstitial Ingress begins when the Sun toucheth the first scruple of ♋, which this year happens on Sunday the 11 of June, at 52 min. past 8 in the morning, at which time we have 37 deg. 49 min. of the Fishes upon the Mid-heaven; and 25 deg. 12 min. of ♋, rising upon our Eastern Finitor. To ♋ is assigned the supreme dominion of this Quarter, he is hastily making his Progress through the Twins, and is located in the 11th House of Heaven. And though the Cloudy Planet ♄ is in the Ascendant, yet the benevolent and serene ♀ is upon the cusp of the same, with the pleasant Venus, which ♀ often and for the most part gives serene and pleasant weather, yet the place of the Zodiack in which they are conjoined is moist and turbulent, which may somewhat abate of the serenity. Si ♄ fuerit in undecima, significat paucitatem Lucri, seu profectus in rebus, de quibus speratur utilitas, &c. If ♄ shall be in the 11th House, he signifieth little gain or profit in those things wherein men have greatest hopes; Breach of Leagues and friendship; men shall be brought into despair by reason of the great disappointments of their hopes and confidence.

Si fuerit ♄ in ♐ significat impedimentum casarum in omnibus, causa Tonitruorum, & fulgurum, & paucitatem pecuniarum; & gravitatem caloris, & ejus nocibilitatem; & erunt bella & contentiones, atq; latrocinia in partibus septentrionalibus; exaltabitur rex illorum in revolutione illa, & habebunt victoriam de inimicis suis. If ♄ shall be in ♐, it signifieth great impediments to men, by reason of Thunder, Lightnings, scarcity of waters, and excess of heat, and its unwholesomeness; and there shall be wars, contentions and robberies in the Northern parts; and that some

shall have victory over his enemies. Men that be
subject to distempers in their ears, Pustules, and such like
sharp humors that run between the skin and the flesh, &c.
in the Ascendant, together with the North Latitude
of γ seems to abate much of the heat and drought signi-
fied by α his Positions formerly recited; and δ 's Loca-
lity in the Ascendant is of no good signification to the
Commonalty; what his signification is in *Leo*, I have al-
ready hinted in the Spring-Quarter.

Of Autumn or Harvest.

THE Autumnal Quarter commenceth with the *Sun*'s
entrance into the first scruple of α , or the *Balance*,
making the second *Aequinox*, and equaling the days and
nights, which happeneth this year on Tuesday the 12 of
Septemb. precisely at 9 of the Clock at night; but the ap-
parent time is at 1 min. and 4 seconds past, at which time
13 degr. and 32 min. of α mediates the Heaven, and 19
degr. and 25 min. of the *Twins* ascends the Horizon. The
Moon is just above the Horizon, all the rest of the Pla-
nets being under the earth; γ and δ are in δ in the *Imo*
Cast. and the Planet μ within two degr. of their γ ,
which is celebrated the next Month, viz. *Octob.* 20, by *Ar-*
gola Ephemeris, by the *British* and *Caroline* Tables on the
22, by Mr. *Gadburie*'s Ephemeris on the 9th. These are ve-
ry remarkable Configurations; and to render them more
admirable, they come to conjunction twice more in
the same Regal Sign the next year 1683; viz. in *January*
and *May*. Which Triple Conjunction will not pass with-
out some remarkable events, great and prodigious Revo-
lutions, famous and admirable Catastrophes in matters of
Religion; and in affairs of the greatest concern and im-
port in the world, and upon the great and most eminent
Potentates of *Europe*. The dire Influence of these so emi-
nent Configurations will most potently afflict *Bohemia*,
and several parts of the Empire, with famine, scarcity of

the fruits of the earth, sickness, and the devouring fire, probably an Invasion from the Grand Signior. *May* herself must feel the stroke, and grim *J*'s foot treads down the pleasant fertility of her soil; and his meagre influence wrinkle the beauty of fair *Rome*, the *Quondam* mistress of the world; her Clergy, even the Apostolick Chair, shall infallibly feel the influence of those transcendent Configurations. And if we give credit to the *Caroline* and *Druid* Tables, the *♄* falls sometime after the New Moon, and we shall find all these Planets that make this Hurly-burly in the world, in the Western angle, which is the House that signifieth quarrels, contentions, controversies, publick enemies, &c. here is a large field to walk in, room enough for the contemplation of the most ingenious in this Science, matter enough to whet their wits, and employ their pens to set forth the grand miseries, fatal Catastrophes, and transcendent mutations that are likely to befall the loftiest Cedars, the potent Potentates, and chief Cities of *Europe*, for these twenty years to come. But this I leave to them that have more time and opportunity for so serious a work. *♂* hath the greatest dominion of this Quarter, and is strong and essentially dignified, denotes profit and good success to all persons signified by him, *viz.* men addicted to Learning and Science, Mathematicians, Philosophers, Poets, Merchants, Secretaries, curious Artificers, and Engineers, and men of invention. *Si fuerit dominus Anno & dominus Ascendentis*, &c. If *♂* shall be Lord of the Year (or Quarter) and Lord of the Ascendant, and free from impediment, it shews the good estate of the people in that Quarter. For the most part when *♂* hath dominion of the Quarter, there followeth a great variety and change of the air; and the Superiors being together, will without doubt incline the air to strong Winds, Thunder and tempestuous weather.

Of the Winter Quarter.

THE Winter Quarter commenceth with the *Sun*'s entrance into the Tropick of *VS*, which happeneth this

in the Meridian of *London* on Sunday the 21 of *December* at 9 min. past 9 in the morning the middle time. At the apparent time there is 14 degr. and 15 min. of \vee ascends the Horizon; and 19 degr. 40 min. of m , culminates upon the Mid-heaven. I and σ have the greatest dominion in this Quarter, with whom *Venus* intermixeth benevolent Temperature. Hence we hope for the most part for a temperate Winter, or at least milder than in some years it hath been. The two Superiors are intercepted in the Western Angle, and Q in the East, from whose influence we hope for moderate weather and actions corresponding, but whatever influence the Superiors give, will be extream, and no mortal man can be positive but conjectural, mans age not being sufficient to give experience; but we may expect at sometimes the winds high and boisterous more than ordinary for the season, and for the most part remission of cold. In this Quarter seems many Treaties and Embassies very earnestly managed, wherein the Kingdom of *England* seem much concerned. A time of counsel, close consults, producing many fears and jealousies among the Commonalty of some Nations, and not without cause. But I forbear further discourse of the Quarterly Ingresses.

Of the COMET 1680.

It appeared first (according to my best information) on Monday 22 of *Novemb.* Tuesday morning it appeared again. I suppose it was in the latter degr. of m , or the beginning of m , the tayl westward extended it self to the *Virgins Spire*. By reason of a cloudy morning or two, and its swift motion towards the Sun, it disappeared, and afterwards became Occidental. For on the tenth of *Decem.* its tayl appeared above the West Horizon after Sun set, and for several nights it appeared higher and higher, somewhat Pyramidical, or like the blade of a sword with the point upwards. On the 15 of *Decemb.* the Star from which the tayl streamed appeared, and the point of the

Pyramid

Pyramid down to the Star, and broad and broad-
wards. On the 16 it appeared again, but the clouds soon
interposed; the 17 it appeared bright and pale west
south-west. On the 18 being Friday it appeared more
glorious, or rather more terrible, the Star it self small
white and glimmering, intermixt (as it were) with fiery
particles, the Tail about 70 degr. in length, its Longitude
about 21 degr. of VS , 14 degrees North Latitude. The
clouds obscuring the air, it appeared not again till the 21
in about 8 degr. of WS , and 25 degr. Latitude North. The
next day in 12 degr. of WS . On the 27 in six degr. of the
Fishes. So it made its progress through γ into δ ; and the
last sight I had of it was near to the *Pleides* with consider-
able North-Latitude, and there expired. Want of time
and instruments convenient, I can give no better account
of its motion. I hope I may beg pardon, and as easily ob-
tain it for not troubling my Reader with the various opi-
nions of Philosophers and Naturalists concerning the
generation, substance and matter of Comets and Blazing
Stars. Nor of the variety of their kinds and names, which
are given them according to their various accidents, of
their shapes and colours. I shall only content my self
in the naming this *Phænomenon*, as it varied its shapes to
our sight. When it appeared in the morning, it appeared
as *Stella Barbata*, a Bearded Comet. At its first appear-
ance in the evening the Star it self being beneath the
Horizon, it might be called *Gladium*, *Metam* or *Pyrami-*
dem, a sword sharp pointed, mark or Pyramid. But when
the Star was above the Horizon, it was properly called
Stella Caudata, a Tayled Comet. They are also defined
according to their colour to be either *Saturnine*, *Jovial*,
Martial, *Solar*, *Venercal*, *Mercurial* or *Lunar*. This Star
appeared for the most part of a dull *Saturnine* colour,
moved direct according to the succession of Signs, swift
of motion, but slower towards its expiration.

Inter nova cæli Phænomena, nullum est quod hominum me-

Further, as effect comets, and fore ad omnia gentes
quodam minus Dei flagellum, & portentionem imminutionis
ingentis mali super terra. Among the new Pheno-
mena of Heaven, there is none doth so much disturb the
minds of men as a Comet, because all men (almost) do
believe it to be a threatening scourge of God, and por-
tends some eminent judgment to fall upon the earth. A
Comet with a very large Tayl, Significat mortem regum,
magnatum, &c. the death of Kings, Nobles, and great
persons, and such as are in great authority, at threatneth
also wars chiefly in those places to which it extends its
tayl.

Cometa quo fuerit propria motu velocior, eo citiores, vela-
cioreq; edet effectus, by how much a Comet is swifter
than the common motion, by so much sooner and swee-
ter will the effects be. Sua durante motu transiens ab uno
signo in aliud; semper sub est dominio ejus Planeta in cu-
jus domo fuerit, &c. If during his motion he passeth out of
one Sign into another, is always subject to the dominion
of that Planet in whose house it shall be, and spend his
influence according to the Planets nature, and more espe-
cially if in his motion he shall be joined to that Planets
body or rays. Further saith, Morinus foritur agit in ea
terra loca quibus sit verticalia, Ideoq; quo ampliorem caeli zo-
nam ab austro in septentrionem percurrit, eo majorem terre
portionem ipsi Zone subjacentem, magnis mutationibus afficiet.
A Comet doth forcibly act in that part of the earth, to
which it was vertical; and by how much larger Zone of
Heaven from the South to the North, the greater porti-
on of earth subject to that Zone, shall be subject to the
greater mutations. Notanda sunt mundi plaga unde emer-
gunt, & moveri incipiunt Cometa. Nam locus unde emergit
cometa, malum illinc proditurum, & effecturam loca ad
quo fertur ipse cometa, motu proprio, scilicet ad ortum, occi-
dum, boream vel austram. You must note where the evils
signified by the Comet begins, and where the Comet first
began

began to move, shews the way that it is thence to be produced; and the places to which the Comet is moved by its proper motion, shews the places subject to these evils, either to the East, West, North, or South, according as its motion is. These general Annotations I thought fit to insert, as being most material, and principally relating to the late Comet. In the next place the signification of the Comet ought to be considered, in relation to its colour, also what it signified in each Sign of the Zodiac through which it passed; but my narrow scantling of Paper will allow me to wade no further, but leave it to another opportunity, or refer it to the pains of those who receive greater encouragement from the Stationer. It ought also to be considered in its motion as it hath relation to the Annual Revolutions of the world, calculated to the Meridians of the several Kingdoms or Commonwealths, their Metropolis, and to the several Genitres of the Grantees of the world, which though it requires an indefatigable pains in the Artist, yet there is an indispensable necessity before he can give a true judgment of the Comet, or great or minor Conjunction.

Of the Eclipses this year, 1681.

THERE will be two Lunar Eclipses this year nearly central and total, one whereof will be visible in our Horizon. The calculation thereof take as followeth.

	D.	H.	M.
Middle time of the true ☿ Febru.	11	11	3
True place of the Sun	♌	3	53
Eccentric place of the Moon	♌	3	53
Anomaly of Latitude	0	1	18
True Lat. of the Moon North Asc.			6
Reduct. substract.			
Hourly motion of ☾ from			36
Time of Reduction, add			

Apparent time of true 8 Febr. 11	10	15	10
Semidiameter of the Moon		16	31
Semidiameter of the Earths Shadow.		41	59
Sum of the Semidiameters		62	34
Parts deficient		55	57
Digits Eclipsed	20	14	13
Scruples of Incidence		63	8
Scruples of half continuance in total darkness	28	39	
Time of Incidence	H 1	50	7
Time of half continuance in total darkness	49	18	
Total duration	3	40	14
Continuance in total darkness	1	39	54
Interval between the true Opposition,			
and greatest obscuration, sub.	{ D. H. M. S.		3
Beginning of the Eclipse February 11.	9	5	20
Beginning of total darkness	10	5	22
Middle or greatest obscuration	10	55	27
End of total darkness	11	45	25
End or full recovery of Moon-light	12	45	34
Latitude of the D at the beginning	10	16	16
End N. A.	41	17	3

The Eclipse begins in the 4 1st House, and ends in the Ninth, the middle is in the Tenth, at which time 17 degrees, and 11 minutes of the Lion, is upon the Meridian, and 4 degr. and 48 min. of the scorpion Ascend. Mars and Mercury have the principal dominion of this Eclipse, Proclus saith, *In de cano primo* M. *negotiorum regum inducit, atque hominum varias discordias, et seditiones.* It also is of evil influence to Vegetables, and the fruits of the Earth. To those whose Genitures correspond in their Helejiacal places, it will be of great importance, forasmuch as it relates to the conjunction and first appearance of the Comet. But I have no room further to proceed.

The other Eclipse of the Moon will be on August the eighth in the morning, not visible to us; and the Eclipses of the Sun scarce worth the Noting, if any be, I have done nothing in it.

Like an adventurous Sea-faring man am I,
Newly arriv'd from some strange colony;
No sooner landed, but askt where I've been,
And what strange things and Countries I have seen;
What Gulphs and Straits, what storms and tempests past,
And on what rocks and sands like to be cast;
Be not too forward in discovery
To Ignorants; for know assuredly,
Whatever doth surpass their shallow Brain,
They do esteem it idle, light and vain;
Conceited Criticks, and the envious Mice,
Condemneth every thing that's not their own;
But the ingenuous sober minded man,
It's he I come to serve in what I can.

Amerham in the
County of Bucks,
August 14, 1681.
